What's new in the D-Hconnect 2018 Upgrade?

On Sunday, October 14, 2018 D-H's electronic medical records system will be upgraded to a new version. This will bring changes and improvements for D-Hconnect users as well. Highlights include a more efficient layout and a new feature that will give you access to information D-H has received from Health Information Exchanges.

D-Hconnect 2018 sports a refreshed color palette, a more efficient layout, and time-saving controls

The Patient Header has been moved to the left, is easier to read, and now contains the patient's allergies. Hover the mouse pointer over the allergies there to see reactions; if a patient has severe reactions on file this area will be highlighted yellow.

You can open these external encounters in the chart review activity and view the information that D-H has received.

Some of the external information we receive is not encounter specific and will not appear in Chart Review. You can go to the Care Everywhere activity to see those patient-level summaries, as well as the information that also appears in Chart Review.

For example, in the patient below, searching for hyperlipidemia returns a list of matches containing Notes, Labs, Meds, and Other Orders. That view can be filtered by clicking on one of those catagories. Search Results are grouped by encounter, and sorted in reverse chronological order. If the search term is found in any external documents, those matches will also be included in the results.
