

SimJunior

SimJunior® is an interactive pediatric simulator, designed by Laerdal with the American Academy of Pediatrics to meet the education and training needs of healthcare providers.

SimJunior represents a 6-year-old boy that simulates a wide range of conditions from a healthy, talking child to an unresponsive, critical patient with no vital signs.

SimJunior allows learners to focus on a broad range of pediatric skills in order to gain exposure and practical experience of life-threatening pediatric problems. SimJunior presents a complete simulation solution for your pediatric training programs.
