## **Care of the Opioid-Exposed Infant Guideline Checklist**

**NNEPQIN Recommendations:** Each nursery that cares for neonates with in-utero opioid exposure should develop and adhere to a standardized approach to evaluation and comprehensive management including screening for maternal substance use, systematically assessing for signs of withdrawal, optimizing non-pharmacologic care including promoting and supporting parental engagement in care, rooming-in, skin-to-skin, and breastfeeding when no medical contraindications are present. Special consideration should also be given to referring families to community supports and promoting safe sleep environments for a safe transition to home.

Guideline Checklist Items	Yes	No	N/A	Comments
Maternal drug and alcohol use screening in pregnancy				
Indications for maternal toxicology testing on admission to the birthing unit (including confirmation of testing if performed and found to be positive)				
Indications for newborn toxicology testing including one or more of the following (check box(es) below if utilized and can leave boxes to right blank)  Urine (including indications for confirmation if performed and found to be positive)  Meconium  Umbilical cord				
Objective scoring or assessment tool used in systematic assessment for NAS (please comment on assessment method used – e.g., Finnegan, Lipsitz, ESC)				
Frequency of NAS assessments listed				
Indications for increased frequency of assessment or evaluation by Infant Provider noted				
Minimum recommended monitoring times for different opiates / opioids listed, including duration of observation after stopping pharmacologic treatment, if initiated				
Family involvement in NAS monitoring encouraged (e.g., with symptom diary or if other method, <i>please describe</i> )				
Family's observation incorporated into NAS scoring / assessments and score / assessment shared with family				

Non-pharmacologic care methods encouraged  Rooming-in Parental presence Skin-to-skin contact Holding/gentle rocking/swaying Swaddling / flexed positioning Optimal feeding including breastfeeding (as able) Non-nutritive sucking (pacifier, finger) Limiting visitors Providing uninterrupted periods of sleep / clustering care		

Guideline Checklist Items	Yes	No	N/A	Comments
Parents taught to identify & appropriately respond to infant's early feeding & stress cues				
Family encouraged to hold infant skin-to-skin, including prior to and during scoring / assessments				
Family encouraged to (breast)feed infant prior to scoring / assessments				
Criteria for mandated reporting listed				
Indications for initiating pharmacological treatment or transfer to another facility for treatment (if required by hospital) listed				
Schedule / dosing recommended for first line pharmacological agent (e.g., morphine) noted for each of following phases:  Initiation / "Capture"  Maintenance Weaning				
Indications for adjunct treatment (e.g., phenobarbital, clonidine) noted				
Schedule / dosing recommended for adjunct pharmacological agent noted for each of following phases:  Initiation / Loading Maintenance Discontinuation				
Cardiorespiratory monitoring recommended while on pharmacological treatment				
Social worker consult to:  Perform initial assessment of mother and newborn Assist in identifying and arranging postnatal supports Perform mandated report to state agency, when clinically indicated				
Safe sleep recommendations listed or separate Safe Sleep Guideline/Procedure referred to within guideline				
Discharge readiness criteria listed				
Newborn visits arranged prior to discharge for 1-2 day inhome VNA follow-up				
Newborn visits arranged prior to discharge for 1-2 day PCP follow-up
