

Dear Colleagues,

We would like to set up an educational event at your hospital to highlight the recent advances in stroke care, including mechanical embolectomy for ischemic stroke, as well as the updated New Hampshire/Vermont/Maine EMS stroke protocol.

During this session, Dr. Tim Lukovits will provide a 45-minute update and will then be available for any questions that your team may have, or we can discuss recent patients that we have cared for together. We would also like to identify some of the issues in stroke care that you face at your hospital, as well as any areas in which our team could provide more support to your providers.

We request that you reach out to our Administrative Assistant, Sarah Braginetz at Sarah.L.Braginetz@hitchcock.org, if you would like us to arrange this event at your site. Please also find a related document included, "Guide for the Identification and Triage of Possible Mechanical Embolectomy Candidates with Acute Ischemic Stroke."

Sincerely,

Timothy G. Lukovits, MD
Medical Director
Cerebrovascular Disease and Stroke Program
