# Views of Honesty & Ethical Standards in Professions

Published on MarketingCharts.com in January 2018 | Data Source: Gallup

Based on telephone surveys conducted among 1,049 US adults (18+)

Q: "Please tell me how you would rate the honesty and ethical standards of people in these different fields - very high, high, average, low, or very low?"

## Spectrum of Advocacy

# Advocacy opportunities

## Engage with legislation

- Draft a bill
- Shape an existing bill
- Testify for or against a bill
- Reach out to legislators
- Work on rules

## Amplify your effectiveness

- Be active in your professional organization
- Volunteer for state service
- Join other boards to shape policies
- Engage colleagues and friends
- Seek out media opportunities

# Create legislation

**LSR to Bill**

## Draft a bill: pharmacologic treatment of opioid addiction

- The challenge: patient on effective treatment moves to NH and is legally unable to get treatment.
- Lessons
  - Take advantage of easy access to legislators in NH
  - Understand the legislative context
  - Identify partners
  - Focus on critical changes (little steps)
- If the law doesn't permit good care, it can be changed.

# Shape existing bills

**Working with sponsors and advocates**

# Shape an existing bill: Comprehensive Addiction Recovery Act (CARA)

- The challenge: getting the nuances of complex medical conditions and the balance between them right
- Lessons
  - Working across the aisle is possible and gratifying
  - NH federal legislative delegation staff are often highly responsive
  - Healthcare professional views are critical to getting it right
- State level opportunities abound
  - Reach out to sponsors
  - Reach out to advocacy groups

# Testify

Opportunities moving through committees and houses

# Testify: An early experience trying to stop lethal injection

- The challenge: can you really humanize killing a human being?
- Lessons
  - Vivid testimony, stories & images illuminate issues
  - Diverse arguments for or against add weight
  - Deferring legislative action can be helpful
- Your voice will be heard if you use it.

# Work on rules

**A little like sausage making**

# Work on rules: shaping opioid stewardship

- The challenge: to create prescribing rules that met both safety and access needs
- Lessons
  - Find common ground
  - Assure all key perspectives are at the table
  - Accommodate outlying situations
  - Make rules accessible to those who must follow them!
- Details of implementation (rules) shape a law's impact

The screenshot shows the OPLC website header with the New Hampshire state seal and the text "New Hampshire Office of Professional Licensure and Certification". A navigation bar includes links for OPLC Home, About Us, The Boards, Licensing, License Search, Report Non-Compliance, and Laws and Rules. The main content area is titled "Board of Medicine Opioid Prescribing" with a subtitle "Information on prescribing opioids for pain management." and a link to the "Board of Medicine Home". Below this, a section titled "Board Approved Continuing Medical Education (CME) regarding Opioid Prescribing" states that prescribers must complete 3 contact hours of free CME. A "Rules" section mentions updates to opioid prescribing rules effective August 4, 2021.

# Amplify your voice

The power of networks and partners

# Amplify your voice

- Get active in your professional organization (NHMS, APS)
  - Staffed for advocacy
  - The weight of a network
  - Sought out by government, other organizations > opportunities to serve
- Volunteer for state service – commissions, task forces, committees,
- Apply for state or regional leadership programs (LNH, regional programs)
- Join boards to shape their policies
- Seek out media opportunities: OpEds, letters, interviews
- Engage colleagues and friends.

Your voice counts!

**New Futures is a nonpartisan, nonprofit organization that advocates, educates and collaborates to improve the health and wellness of all New Hampshire residents through policy change.**

**DRUG &  
ALCOHOL**

**ACCESS TO  
TREATMENT**

**HEALTH  
CARE**

**EARLY  
CHILDHOOD**

**CHILDREN'S  
BEHAVIORAL  
HEALTH**

# About New Futures

## Advocate

## Collaborate

## Educate

### New Futures Training Program

- Free to nonprofits, coalitions, and community organizations who will advocate for the health and wellness of NH residents
- Trainings for:
  - Individual Advocates
  - Building organizational advocacy capacity
  - Educating on New Futures policy issues

[www.new-futures.org/trainings](http://www.new-futures.org/trainings)

# *Advocacy Opportunities: NHHA*

***The world is run by those who show up...so get engaged!***

- NHHA Board of Trustees is the ultimate policy setting body of the New Hampshire Hospital Association
  - Leadership group elected by the hospital membership
- Informed by several committees, task forces and ad hoc groups
  - Executive Committee
  - Advocacy Task Force
  - Strategic Planning
- Member engagement drives our success

# *Advocacy Opportunities: NHHA*

- Several professional peer groups have been created through the NHHA and our affiliate, the Foundation for Healthy Communities, that help inform policy and advocacy initiatives/activities
  - Professionals within many different areas, for example:
    - Finance
    - Information Technology
    - Human Resources
    - Patient Accounts
    - CMO/CNO
    - Case Managers
    - Population Health
    - Diversity, Equity and Inclusion
    - And more!

Our physician community drives how NHMS handles public policy!

How does legislation impact your practice and patients?

Wondering how to get involved?

- Work with NHMS Director of Advocacy, Mike Padmore on how you can engage in the legislative process as a practicing or retired physician
- NHMS Legislative Committee
- Run for local office!

## [Join Us | New Hampshire Nurses Association | Nursing Network](#)

**Together, We're Building a Brighter Future for New Hampshire Nurses**

[Join NHNA & ANA for Just \\$15/Month!](#)

- Advance Your Career
- Stay Up to Date on Nursing Issues & News
- Improve Your Clinical & Managerial Skills
- Save Money
- Support a Stronger, More Influential Nursing Profession
- When you join you'll have access to ANA resources that will help you

Then decide to join the Commission of Government Affairs and become an LAC member

## About the NHPHA: *Improving Health, Preventing Disease, Reducing Costs for All*

NHPHA was established in 1990 and then incorporated in 1992 as a 501c(3) private, not-for-profit organization. In January 2004, the organization declared 501c(3)(h) status. NHPHA is an affiliated association of the American Public Health Association (APHA). For more info: [www.nhpha.org](http://www.nhpha.org)

### **Our Mission**

NHPHA is a member-driven organization that champions public health policy and practice, enriches the workforce, and inspires leaders to improve the public's health.

### **Our Strategic Priorities**

NHPHA carries out its work using the following three strategies:

- 1.Strengthen the workforce through professional [development](#):** We offer training opportunities, student intern stipends, and a public health mentor program.
- 2.Develop and implement strategic communications to inspire a public health movement:** We disseminate communications messages through a variety of media to keep members and the public updated on key public health issues.
- 3.Champion public health policy and [advocacy](#):** We develop and advocate on priority public health policy areas of concern to our members and the public.

## Advocacy

• New Hampshire State House Laws, regulations, and public policy can have a major effect on public health. The NH Public Health Association utilizes education and advocacy to help enact effective policies that support both population-based and individual health throughout our state and communities.

NHPHA Public Policy Committee Chair: Annika Stanley-Smith

[annika.stanley-smith@graniteuw.org](mailto:annika.stanley-smith@graniteuw.org)

The image shows a document titled "NHPHA 2020-2022 Legislative Priorities". At the top is the NHPHA logo, which includes a circular arrow icon and the text "NEW HAMPSHIRE PUBLIC HEALTH ASSOCIATION" and "Improving Health, Preventing Disease, Reducing Costs for All". To the right of the logo is contact information: "100 Park Street, Suite 400, Concord, NH 03301", "603.224.0583", and "info@nhpha.org, www.nhpha.org". The document lists four main legislative priority areas, each with a list of specific advocacy goals:

- PREVENTION AND ACCESS**  
Public Health Preventive Efforts and Health Access, Particularly for Underserved Populations
  - Advocate for community health workers infrastructure funding
  - Advocate for funding and infrastructure for equitable distribution of vaccines
- PUBLIC HEALTH INFRASTRUCTURE**  
Strong Local and State Public Health Infrastructure
  - Advocate for funding to support foundational public health services at the state and local levels
  - Advocate for support to implement the State Health Improvement Plan and ensure it addresses the need of marginalized and vulnerable populations
- FINANCIAL SECURITY**  
Policies that Enable Families to Earn a Living Wage and Care for Their Families
  - Support efforts to provide for a living/minimum wage
  - Support efforts for job training for skill-based careers, particularly for marginalized populations
  - Support a step-down approach to public benefits reductions
- FOOD SECURITY**  
Policies and Programs that Increase Access to Healthy, Affordable Foods
  - Advocate to expand use of the WIC program (farmer's market, online purchasing)
  - Support expansion of SNAP, Granite State Market Match, and farm-to-school initiatives

\* Policy actions beginning with the word advocate are those for which NHPHA will take an active role. Those beginning with the word support are those for which NHPHA will assist others in leading advocacy.

At the bottom right is the APHA logo with the text "American Public Health Association" and "Public Health - Our Communities".

# National & Regional Healthcare Workforce Shortage

## Key Trends impacting our regional labor pools

- 1 **Aging Population.** New Hampshire and Vermont have the 3<sup>rd</sup> and 4<sup>th</sup> oldest populations in the country with a median age of 43.
- 2 **Slow Growth.** New Hampshire and Vermont population growth is approximately 1%, compared to 4+% nationally.
- 3 **Increasing Competition** amongst healthcare providers as well as from other industries.
- 4 **Low Unemployment Rate.** The unemployment rate in New Hampshire and Vermont is 2.5 - 2.7% respectively.
- 5 **Cost of living comparable to urban areas:** high cost of living pushes our workforce to more rural parts of the state. Even with significant investment in compensation it is not possible to keep up with rising inflation.

\* Bureau of Labor Statistics and U.S. Census Bureau, National Hospital Association

**National Problem, Local Pain**

# Housing Challenge:

## Critical Inventory Shortage:

- Current inventory does not meet current or future needs
- There is a 98% occupancy rate in the Upper Valley

## Affordability:

- The inventory that is available is not affordable for the majority of the positions for which Dartmouth Health hires
  - Affordable housing costs (rent/mortgage, interest, taxes, utilities) are typically defined as no more than 30% of gross income, for example:
    - \$70k annual salary: 30% on housing costs is \$2,100/month
    - \$50k annual salary: 30% on housing costs is \$1,500/month
- Current available inventory in the Upper Valley is typically priced between \$1,900 - \$2,600/month not including utilities

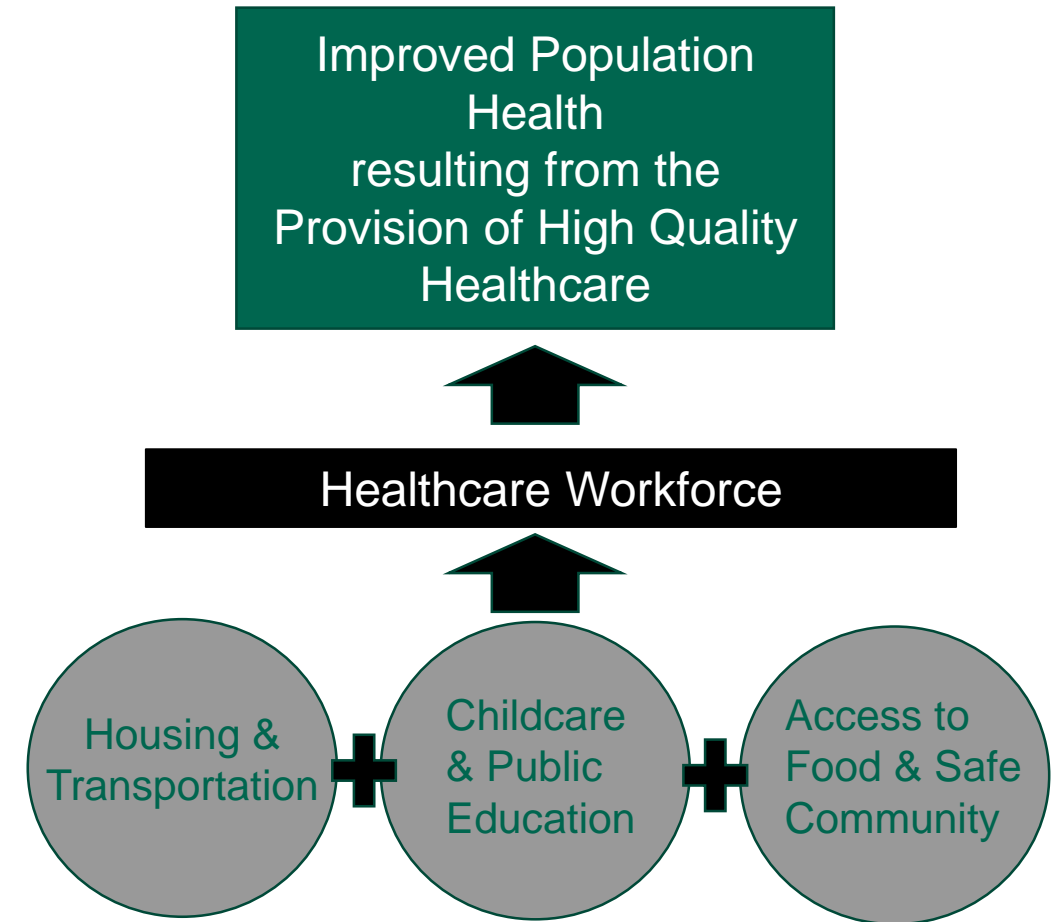

## Rippling Impacts

### Workforce Needs:

- Currently 1900+ openings at Dartmouth Health
- Small regional talent pool means more people needs to relocate to fill open position.
- Demand for healthcare services continues to increase resulting in planned increases to facilities and services. This further increases the demand for workforce housing and childcare.

### Impact to Recruitment:

- Candidates are declining offers or withdrawing their acceptance of an offer once they research housing options and can't find reasonable options
- New hires secure affordable housing but have a 30-60minute commute each way
- Candidates who are joining us are doing under high stress conditions related to housing and childcare
- When childcare can't be found it becomes impossible to return to the workforce
- Short term housing needed for travelers (average length of service 13-26 weeks)

Reality: a one bedroom apartment in the Upper Valley costs between \$1800-2200/month

## Example 1:

Newly graduated, medical or nurse resident earning \$60,000/year\*. They are excited to start their career and want to rent their own apartment close to work. They do not want to share with a roommate and are considering getting a pet.

Student loans and their car payment is also a factor when considering how much they can spend on rent.

## Monthly Budget:

Monthly income after taxes	\$	3,950
Budget for rent & utilities (est. 30%% of income)	\$	2,200
Car Payment, Insurance & Gas	\$	500
Healthcare Premiums	\$	100
Student Loans	\$	250
Groceries	\$	300
<b>Total:</b>	<b>\$</b>	<b>3,350</b>
Disposable Income		\$600 or 15%

\*Salary quoted for illustrative purposes. Actual salaries vary by role, organization and region.

## Example 2:

The median family income in New Hampshire is just under \$78,000. Let's imagine a family of 4, with one school age child and one child in fulltime daycare.

## Monthly Budget:

Monthly income after taxes	\$	5,375
Budget for rent & utilities (est. 30% of income)	\$	1,700
Daycare	\$	1,000
Car Payment, Insurance & Gas (1 vehicle)	\$	500
Healthcare Premiums	\$	250
Student Loans	\$	250
Groceries & Household Supplies	\$	800
<b>Total:</b>	<b>\$</b>	<b>4,498</b>
Disposable Income		\$875 or 16%

If possible to find housing that fits their budget there is very little left for 'extras' like clothes, car repairs, contingency or retirement savings, etc..

# Community & Workforce Needs

- Investment in housing that is affordable to our workforce:
  - Young professionals and families earning between \$40-75K
  - Additional supply so that more people can relocate to this region
- Investment in different types of housing so that when young professionals are ready to grow out of their apartment they have a place to move (and stay in our region/workforce)
- Thoughtful placement of housing to ensure our critical services such as hospitals can continue to operate and provide care to our people in our communities (reduce commute).
- Commitment to statewide expansion and stabilization of childcare services (both early childhood and after-school programs) so parents can reenter our workforce.

# Housing as a Determinant of Health

April 20, 2022  
Political Determinants of Health  
Project ECHO

**Terri Lewinson, PhD, MSW**  
Health and Aging Policy Fellow  
Associate Professor  
Dartmouth College  
[Terri.d.Lewinson@Dartmouth.edu](mailto:Terri.d.Lewinson@Dartmouth.edu)

# Focus: Housing Precarity

## Housing is Unaffordable / Inaccessible

- Over 38 million Americans live in poverty;
- Most low-income people experience severe housing cost burden and spend over 50% of their income on housing costs;
- Over 4 million people “double up” with others due to financial hardship;
- Nearly 600,000 people experience homelessness per year in U.S.;
- In 2016, an average of nearly 4 million evictions were filed annually.

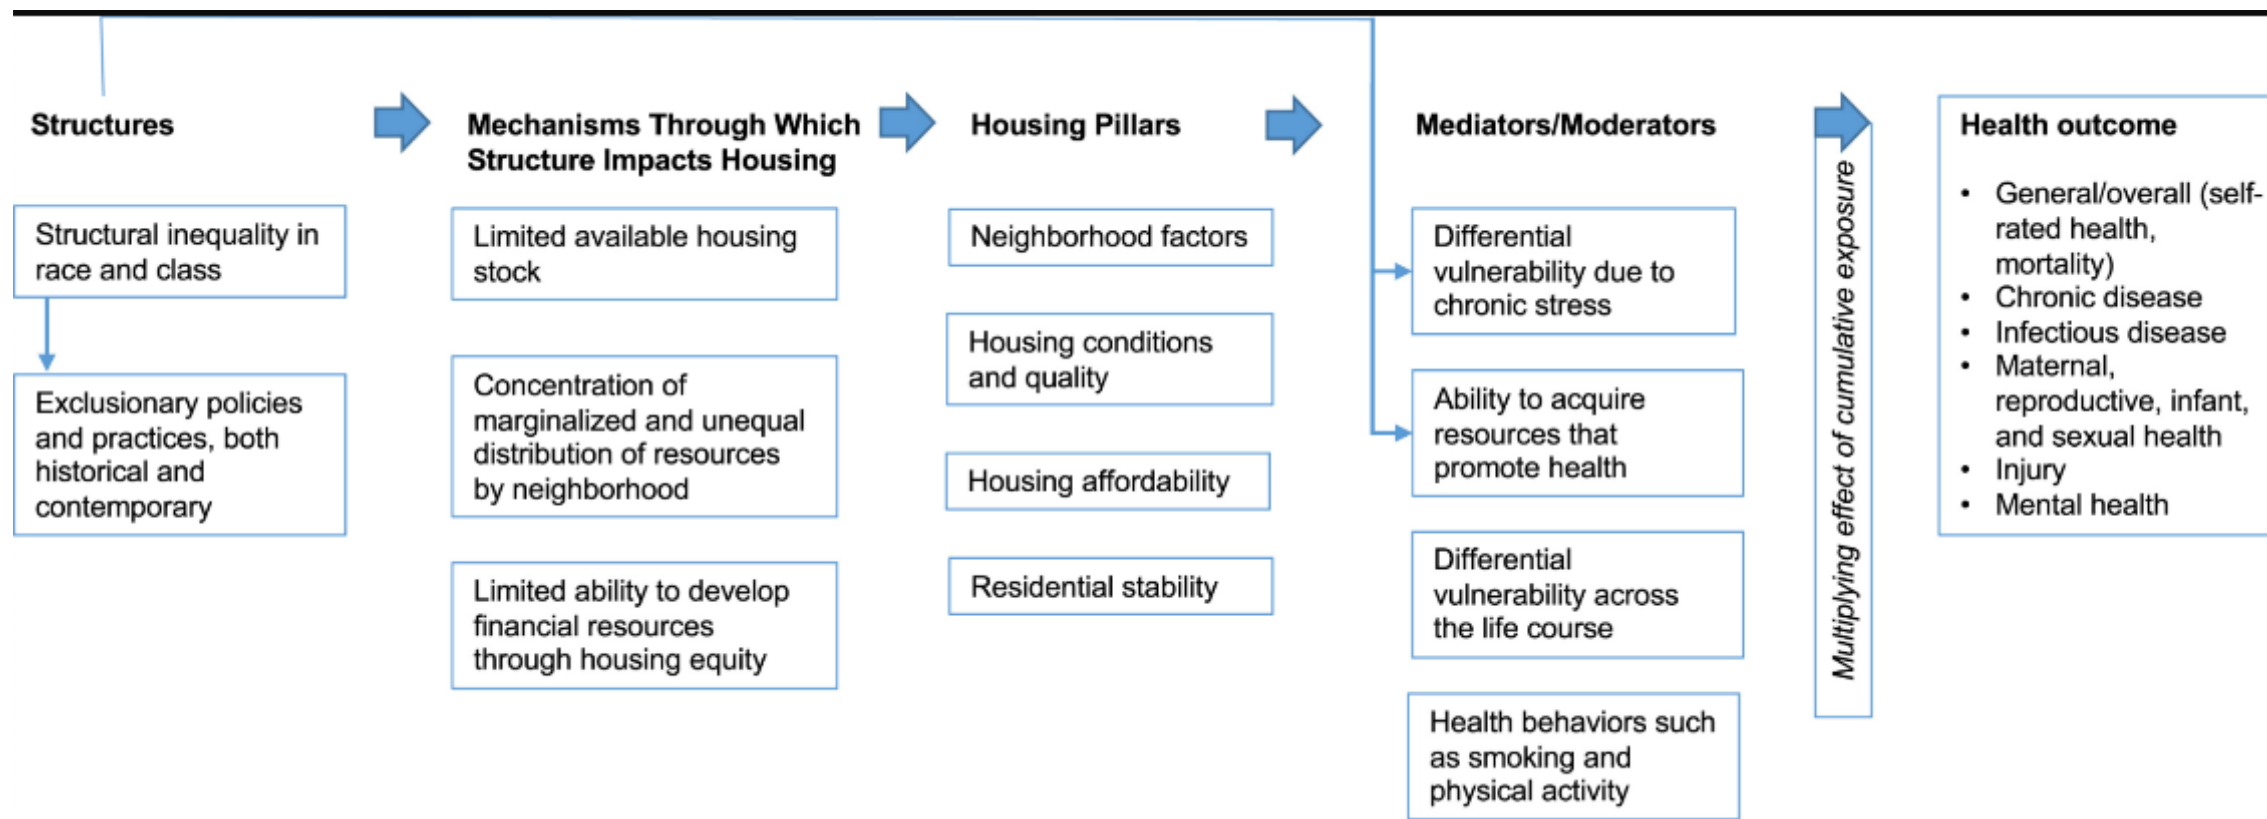

## Housing and Health are Interconnected

- Housing precarity restricts access to preventive health care, healthy food options, social engagement, etc.;
- Deficient housing and instability are associated with many physical and mental health conditions
  - Poor air conditions, toxin exposure, structural deficiencies, violence/crime create risks for chronic and acute health challenges (COPD, depression, injuries, cognitive decline, etc.);
- Housing oppression led to health disparities.

(Benfer et al., 2020; NAEH, 2020; Swope & Hernandez, 2019)

# Swope and Hernandez (2019)

## Housing and Health Disparities Conceptual Model

# Stats

This Cause:	Can Become this Illness or Condition:	How to Prevent this Illness or Condition:
In homes built before 1978: • Peeling paint • Sloppy repair/paint work	Lead poisoning – causes lower IQ and other learning and behavior problems in children	<ul style="list-style-type: none"> <li>• Fix lead hazards</li> <li>• Work safely and check for dust</li> <li>• Clean up the site after any work is finished</li> </ul>
Smoking, secondhand smoke	Asthma, respiratory problems, sudden infant death syndrome (SIDS), lung cancer, <u>and</u> deaths from fires	<ul style="list-style-type: none"> <li>• Don't smoke in the home</li> <li>• Don't let anyone else smoke in the home</li> </ul>
Radon	Lung cancer	<ul style="list-style-type: none"> <li>• Install fan systems that can remove radon or vapor barriers that can block radon</li> </ul>
Lack of a working smoke alarm	Fire injuries and deaths	<ul style="list-style-type: none"> <li>• Install smoke alarms on every floor of the home</li> <li>• Use long-life smoke alarms with lithium-powered batteries</li> <li>• Test all smoke alarms every month</li> </ul>
Moisture and mold	Asthma and respiratory problems	<ul style="list-style-type: none"> <li>• Fix water leaks</li> <li>• Keep house well ventilated</li> </ul>
Pesticide use	Acute poisonings and possible chronic conditions such as cancer, low birth weight and prematurity	<ul style="list-style-type: none"> <li>• Keep pests out by cutting off their water, food, and access</li> <li>• Use pesticides wisely</li> <li>• Store pesticides properly</li> </ul>

[https://www.cdc.gov/nceh/lead/docs/publications/final\\_companion\\_piece.pdf](https://www.cdc.gov/nceh/lead/docs/publications/final_companion_piece.pdf)

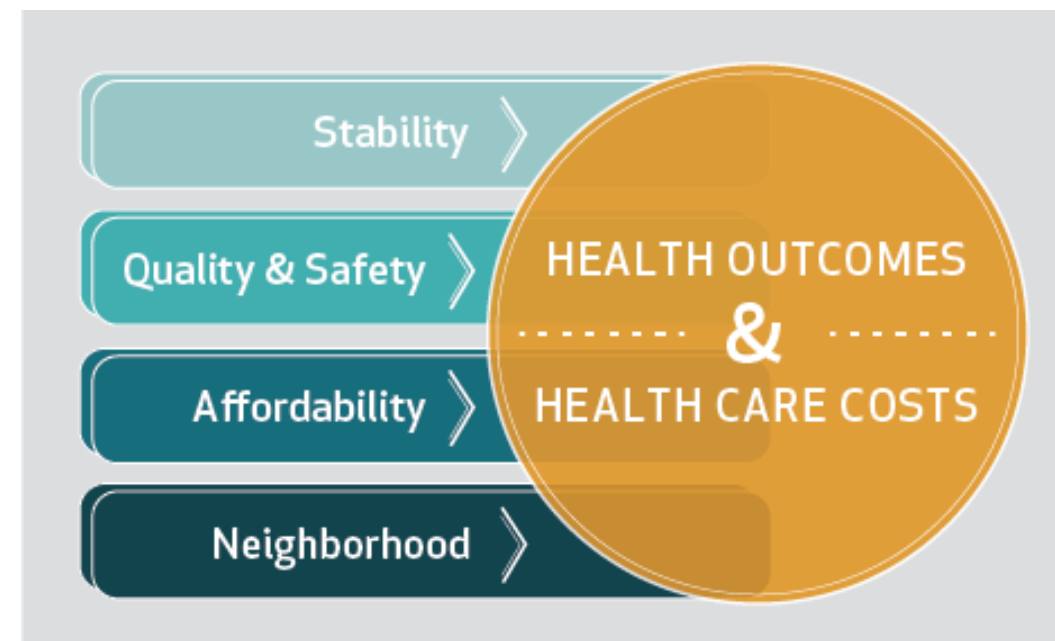

## Many homes have unhealthy conditions:

- 1 in 16 have high radon levels
- 1 in 10 have water leaks
- 1 in 6 have structural problems
- 1 in 4 have lead-based paint
- 1 in 4 do not have a working smoke alarm

## The housing problems that can make us sick are interconnected:

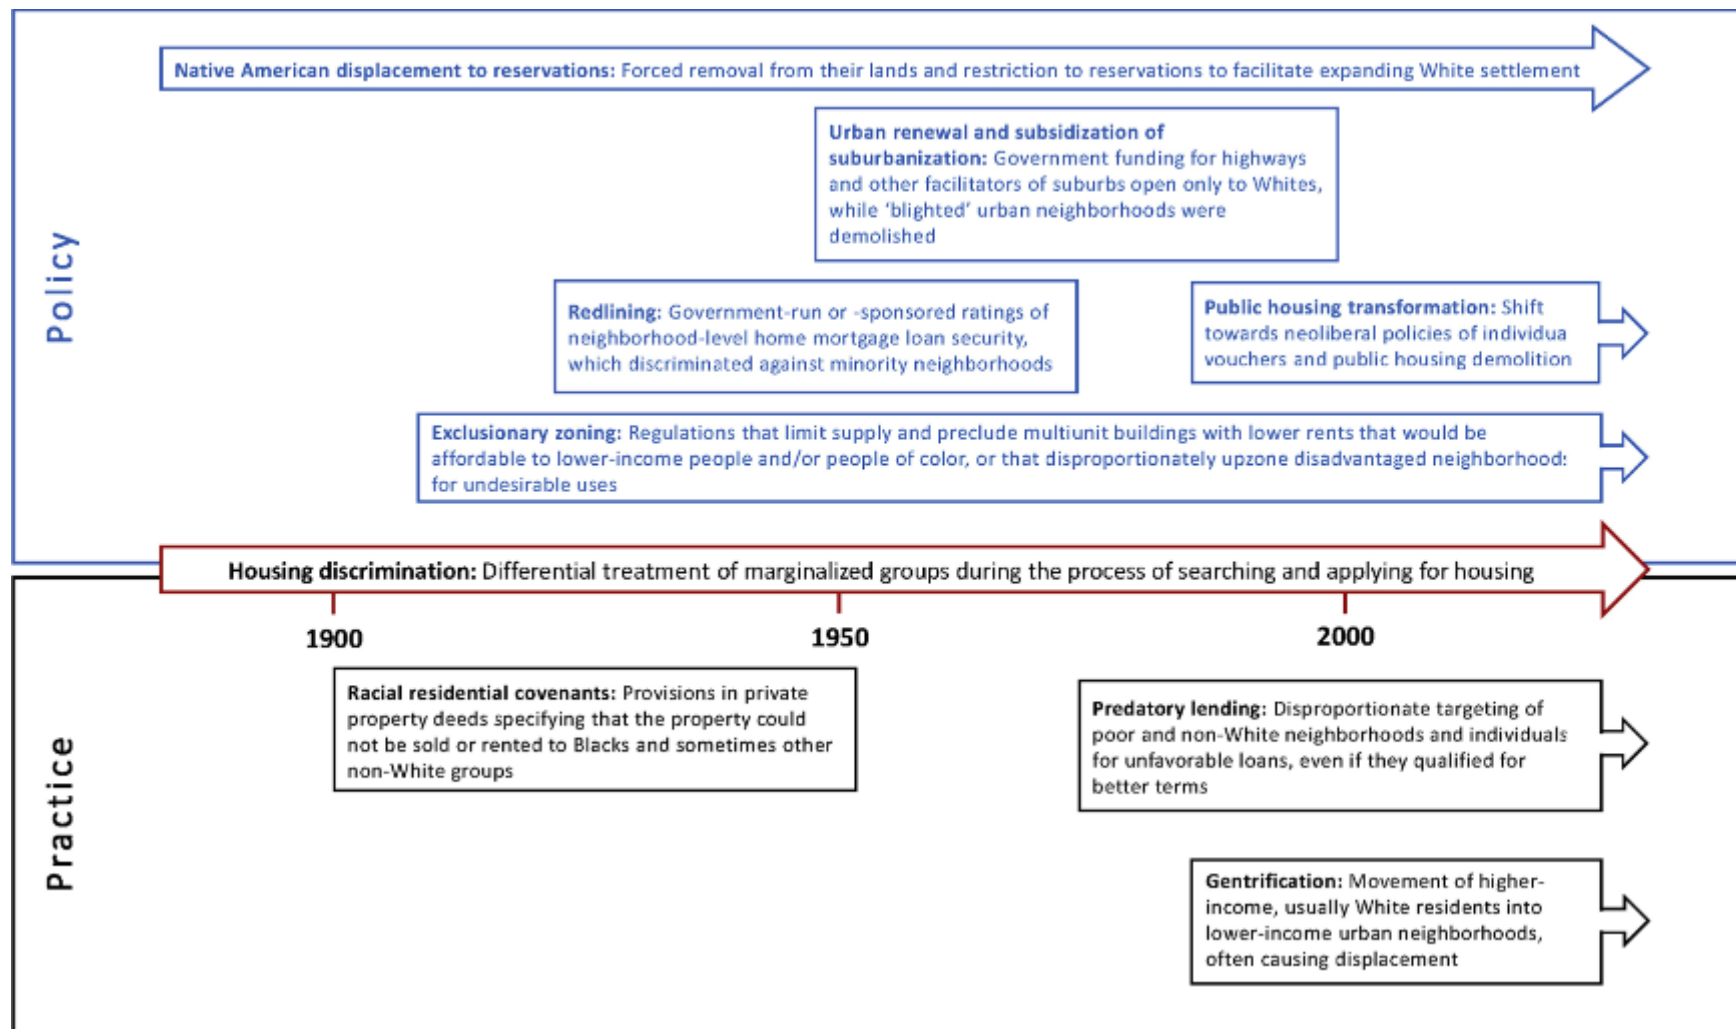

- Lack of ventilation (airflow) keeps poisons in and builds up moisture.
- Moisture causes deteriorated paint, attracts and sustains pests, and leads to mold.
- Pests make holes that become leaks and make people use poisonous pesticides.

# Policies and Practices Contributing to Housing Disparities

# Potential Housing Strategies

Policy or Program	Description
Zoning regulation for land use policy	Use zoning regulations to address aesthetics and safety of the physical environment, street continuity and connectivity, residential density and proximity to businesses, schools, and recreation, etc.
Inclusionary zoning and housing policies	Require developers to reserve a proportion of housing units for residents with low incomes via mandatory requirements or incentives such as density bonuses
Rent regulation policies	Establish tenant protections via regulations to the housing rental market such as limits on rent increases and eviction protections for tenants with low incomes; typically via rent stabilization
Housing reparations	Apologize for discriminatory housing policies; increase subsidies, financing, and paths to homeownership for people of color; and invest in systematically disadvantaged neighborhoods

Policy or Program	Description
Housing choice voucher program (Section 8)	Provide eligible families with low and very low incomes with vouchers to help cover the costs of rental housing; also called Section 8
Housing first	Provides rapid access to permanent housing and support (e.g., crisis intervention, needs assessment, case management), usually for chronically homeless individuals with persistent mental illness or substance abuse issues
Housing rehabilitation loan & grant programs	Provide funding, primarily to families with low or median incomes, to repair, improve, or modernize dwellings and remove health or safety hazards
Rapid re-housing programs	Transition families and individuals experiencing homelessness into permanent housing quickly, often with supports such as short-term financial assistance, case management, landlord negotiations, etc.

*Thank you!*

# Political Determinants of Health

## Focus on Postpartum Medicaid Expansion

Daisy Goodman, CNM, DNP, MPH,  
Julia Frew, MD

# Importance of Postpartum Health Care

- Recovery from childbirth
- Follow up on pregnancy complications
- Management of chronic health conditions
- Preventive health care
- Access to family planning
- Screening, diagnosis, and treatment for maternal mental health

*Relationship with an obstetric care provider is often the only point of contact with the health care system for reproductive-aged women.*

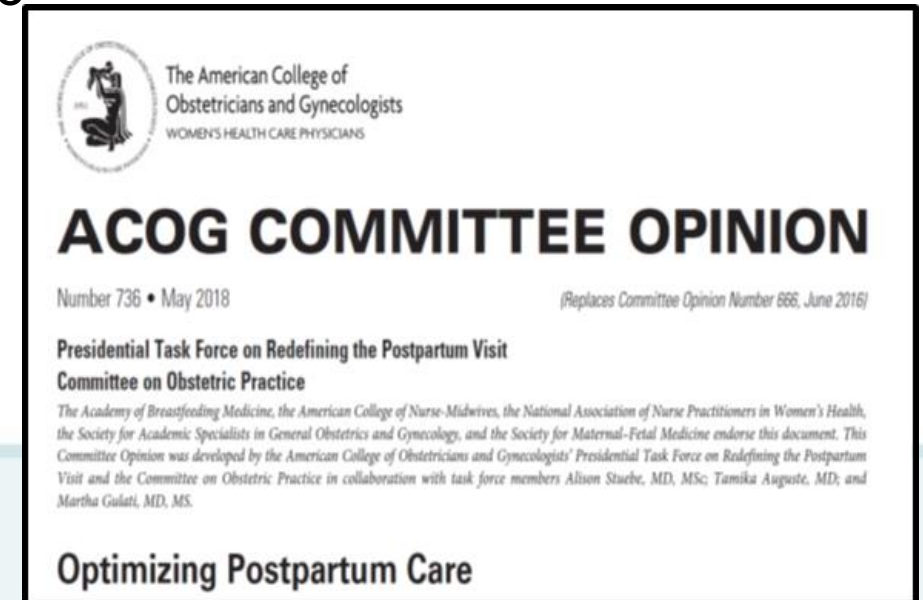

# Maternal Mortality Occurring After 6 Weeks Postpartum In The United States

# Redefining Postpartum Care

## ACOG Committee Opinion 736- *Optimizing Postpartum Care*

- ✓ Engagement across Fourth Trimester
  - Short interval follow up (1-2 weeks)
  - Pregnancy spacing/reproductive life plan
  - Emphasis on screening for social determinants and linkage to services
- ✓ Multidisciplinary
  - Lactation support
  - Mental health evaluation/treatment
  - Substance use screening/treatment
- ✓ Personalized transition to a primary medical home

# Postpartum Medicaid Coverage: Nationally and in NH

- Medicaid covers 4 in 10 births in the US, and 3 in 10 in NH
- Eligibility is capped at higher levels than for non-pregnant people
- Outside of the context of public health emergency, pregnancy-related Medicaid eligibility ends for many women at 42-60 days postpartum
- This leads to a gap in eligibility for postpartum people
- This gap is most significant in states which have not expanded Medicaid- but is still significant in NH

# Postpartum Rates of Medicaid Coverage Are Higher Than Pre-Pregnancy Rates

In Expansion States, Higher Rates of Medicaid Coverage and Fewer Uninsured Among Postpartum Women

Coverage status of women who have given birth in prior year

■ Private Insurance ■ Medicaid ■ Uninsured

NOTE: Percent may not add up to 100% due to rounding.

SOURCE: Daw JR, Kozhimannil KB, & Admon LK. [High Rates of Perinatal Insurance Churn Persist After the ACA](#). Health Affairs Blog. September 16, 2019.

# Improving Care and Coverage

- NH Healthy Moms, Healthy Babies Act of 2022
  - Based on Federal legislation (“Improving Care and Coverage for Mothers Act”)
  - Upcoming hearing April 12
  - Will maintain postpartum Medicaid coverage for 12 months for women with incomes up to 196% of the federal poverty level (FPL)
  - Women with incomes below 138% of the Federal Poverty Limit will continue to be covered under the Granite Advantage Program

*“The purpose of the program shall be, through ensuring continuous coverage for a 12-month postpartum period, to increase identification and mitigation of preventable pregnancy related and pregnancy associated morbidity and mortality, including those related to substance use disorder and mental illness”*

# Can legislation make a difference?

Four Postpartum Cases

# Perinatal Mental Health

Perinatal depression affects as many as  
**one in seven women.**

ACOG recommends all pregnant women be screened at least once during the perinatal period.

Mental health and substance use disorders are the leading cause of maternal mortality during pregnancy and up to 1 year postpartum

Without insurance coverage, many women cannot afford to continue receiving mental health or SUD treatment or fill needed prescriptions

Dartmouth-Hitchcock

# Cristina

24 year old woman, currently 8 months postpartum, with history of depression, anxiety, and PTSD. Her partner was employed, so she was not eligible for Medicaid due to household income over the eligibility cap.

Cristina was started on antidepressant medication for her postpartum depression at her 6 week postpartum visit, but then stopped her medication because she could no longer afford to fill the prescriptions. She also stopped seeing her counselor for the same reason.

Feeling more depressed with suicidal ideation, she called a crisis hotline and was advised to go to the emergency department. There, she was evaluated and assessed to need inpatient psychiatric admission.

# Pregnancy Intention

According to 2020 NH Pregnancy Risk Monitoring System (PRAMS) Data, only 69.9% of mothers wanted to be pregnant at the time they became pregnant.

# Kelli

A 28 year old woman, currently 4 months postpartum, Kelli did not attend her 6 week postpartum visit as her infant was sick. She was unable to reschedule due to loss of insurance coverage.

Kelli started working part time as an in-home childcare provider, which made her ineligible for Medicaid coverage. Her employer could not offer her health insurance, so she was uninsured.

Although she planned to start oral contraceptives at her postpartum visit, she discovered she was pregnant again at 4 months postpartum.

# Maternal Cardiac Disease

Nationally, 23% of late postpartum deaths are caused by cardiomyopathy

According to the American College of Obstetricians and Gynecologists, 88% of the women who died would have been identified as high risk and referred if they had been appropriately evaluated.

# Mia

A 38 year old woman with history of pre-eclampsia, currently 6 months postpartum. She was diagnosed with chronic hypertension during her pregnancy, having not received much medical care prior to that time, and during her pregnancy also developed pre-eclampsia.

She was advised to have her blood pressure evaluated, but missed her 6 week appointment and then lost Medicaid coverage as she started working again part time.

Over the past few months she experienced increasing shortness of breath at rest, swelling in her legs and feet, and sometimes heart palpitations, which she attributed to being overtired after work.

She presented to her local emergency department due to difficulty breathing, and was diagnosed with cardiomyopathy.

Dartmouth-Hitchcock

# Overdose

# Fatal and Nonfatal Overdose Among Pregnant and Postpartum Women in Massachusetts

*David M. Schiff, MD, MSc, Timothy Nielsen, MPH, Mishka Terplan, MD, MPH, Malena Hood, MPH, Dana Bernson, MPH, Hafsatou Diop, MD, MPH, Monica Bharel, MD, MPH, Timothy E. Wilens, MD, Marc LaRochelle, MD, MPH, Alexander Y. Walley, MD, MSc, and Thomas Land, PhD*

Schiff, et al. *Obstet Gynecol* 2018; 132: 466-74

## Population-based study of treatment engagement and overdose among perinatal women

- Overdose risk was lowest during pregnancy and highest at 7-12 months postpartum
- Only 64% received pharmacotherapy for OUD during the prenatal year
- **Pharmacotherapy reduced overdose risk > 50%**
- Factors associated with overdose included anxiety, depression, homelessness

# Diana

Diana was 3 months postpartum when she died of an accidental overdose, leaving behind her 4 year old son and 3 month old infant.

During her last pregnancy, she had been stable in recovery from opioid use disorder, treated with buprenorphine/naloxone. When she lost insurance coverage postpartum, she tried to stop this medication on her own because she was unable to afford treatment visits or prescriptions.

Diana was able to manage her withdrawal symptoms and cravings for a few weeks, but then was offered medication by a friend to help with her withdrawal. This medication turned out to be counterfeit, containing fentanyl, causing her to overdose. When EMS arrived, they were unable to resuscitate her.

# States Expanding Postpartum Medicaid Coverage

Postpartum Coverage Tracker Map

- Approved 1115 waiver (5 states)
- Enacted legislation to seek federal approval through SPA or 1115 waiver (15 states & DC)
- Pending legislation to seek federal approval through SPA or 1115 waiver (6 states)
- Planning to submit a SPA or 1115 waiver (4 states)
- Proposed/pending 1115 waiver (1 state)

NOTE: Pending legislation includes legislation that has passed one or both chambers. \* State limits the eligible population, provides a limited benefit package, and/or limits the coverage period (<12 months). DC has enacted legislation to seek federal approval through SPA or 1115 waiver.

SOURCE: KFF analysis of approved and pending 1115 waivers, state plan amendments, and state legislation.

# Vaccines, Vaccine Registries and Public Health

Susanne Tanski, MD MPH

Section Chief and Vice Chair of Pediatrics  
Children's Hospital at Dartmouth-Hitchcock

# What's a Vaccine? Why do we vaccinate?

- A training exercise for the immune system
- Vaccines contain a dead or weak form or fragment of the virus or bacteria to train the body to fight of an infection, or to not get sick from the infection
- Bacteria: diptheria, tentanus, whooping cough, some causes of meningitis, typhoid, tuberculosis, bubonic plague, anthrax and cholera
- Viruses: influenza, measles, mumps, rubella, chicken pox, yellow fever, rotavirus, smallpox (now eradicated), and Covid-19

## WEAKEN THE VIRUS

Viruses are weakened so they reproduce poorly inside the body.

## INACTIVATE THE VIRUS

Viruses are completely inactivated (killed) with a chemical.

# TYPES OF VACCINES

## USE PART OF THE PATHOGEN

### USE PART OF THE PATHOGEN

Part of the virus or bacteria is used as the vaccine.

### INACTIVATE THE TOXIN

A harmful protein made by the bacteria (toxin) is inactivated (killed) with a chemical. The inactivated toxin is called a toxoid.

## USE PART OF THE GENETIC CODE

### VECTOR VIRUS

The gene from the pathogen is put into a virus that can't reproduce itself but can still enter cells and deliver the gene.

### mRNA

mRNA that is the blueprint for a protein from the pathogen is used as the vaccine.

### DNA

DNA, the genetic code from which mRNA is made, is used as the vaccine.

# The Role of Vaccines in Public Health:

## INDIVIDUAL benefits

**Reduces serious disease and death**

**Prevents long-term sequelae**

Polio example:

*Acute polio*: asymptomatic to mild flu-like illness  
“non-paralytic polio”

*Paralytic polio*: Progressed to loss of reflexes and temporary or permanent paralysis and death

*Post-polio syndrome* – 15 to 40 years later – progressive muscle weakness leading to disability that affects up to 40% of polio survivors

### Polio cases and deaths in the US since 1943

The rapid distribution of a new and effective polio vaccine starting in 1955 led to the disease's elimination from the United States in 1979.

Chart: The Conversation, CC-BY-ND •

Source: [Our World in Data](#), derived from US Public Health Service and the Centers for Disease Control and Prevention • [Getthedata](#)

# The Role of Vaccines in Public Health: INDIVIDUAL and FAMILY benefits

Prior to vaccines, childhood and parenthood was marked by quarantines and illnesses:

Quarantine for measles after exposure: 21 days (contagious for 4 days before and after the rash... incubation ~8-12 days)

Quarantine for chicken pox: Infectious before rash, home until all spots have scabbed over – 7-10 days

Quarantine/isolation for Covid-19: 10 days

*Missed school, Missed work (and often Misery)*

## DID YOU KNOW?

### Parents Miss Work When Children are Ill

When children are sick with vaccine-preventable diseases, parents have to stay at home for extended periods of time.\*

#### INCUBATION PERIODS BY DISEASE

Chickenpox 10-21 days	Measles 8-12 days	Rubella 14-21 days
Diphtheria 2-5 days	Influenza 1-6 days	Whooping Cough 7-10 days
Hepatitis A 14-50 days	Mumps 12-25 days	Meningitis (bacterial) 2-10 days

# The Role of Vaccines in Public Health: INDIVIDUAL, FAMILY and COMMUNITY benefits

 UNVACCINATED  VACCINATED  SICK

## HOW HERD IMMUNITY WORKS

When no one has immunity, contagion has many opportunities to spread quickly.

The more immunity we have in the system, the less often contagion comes into contact with the susceptible.

Spread of contagious disease is contained.

# Vaccines are COST SAVING for INDIVIDUALS, FAMILIES and COMMUNITIES

## The Economic Burden of Vaccine-Preventable Diseases

**While vaccines save money, treating vaccine-preventable diseases can be expensive for local, state and national authorities:**

# Measles is another example of vaccine success (“eliminated” in 2000), with a cautionary tale...

## Measles vaccine coverage worldwide vs Measles cases worldwide

Shown on the x-axis is the share of 1-year-olds who have been vaccinated against measles (MCV1) in a given year.

# NEW HAMPSHIRE UNION LEADER

---

February 07. 2015 6:05PM

## **NH leads the nation in vaccinations for measles, mumps and rubella**

**By PAUL FEELY**

**New Hampshire Union Leader**

CONCORD - At 96.3 percent, New Hampshire has the highest measles, mumps and rubella (MMR) vaccination rate for infants in the country, according to a study released last week. The state's department of Health and Human Services reports over 97 percent of all school-aged children have received immunizations.

# Vaccine Registries – Proposed in 1997, enacted in NH in 2021. What are they?

What? An electronic database of consolidated and **CONFIDENTIAL** listing of a population's immunization records, available to healthcare providers, schools, public health agencies and the patient/parent

Why? By 2 years of age >20% of kids in the US have seen more than one medical providers, resulting in scattered records

Why? Vaccines save lives, reduce disease and disability, and preserve our economic engines. It's important to identify populations at risk

## People receive vaccinations from a variety of places

## These sources send vaccination records to state or city IIS

## IISs provide records to patients and authorized professionals

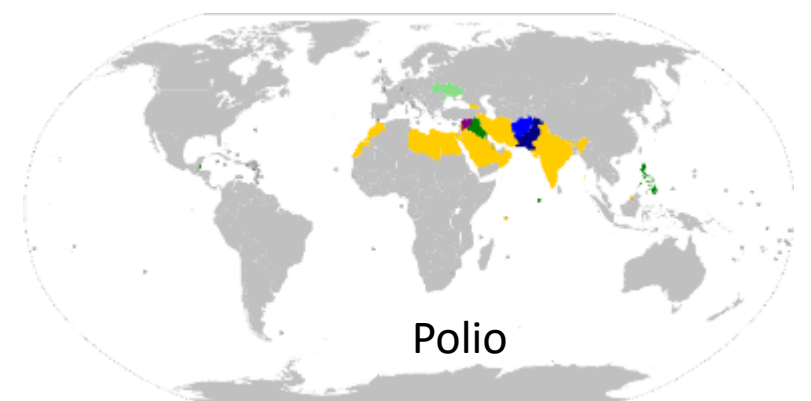

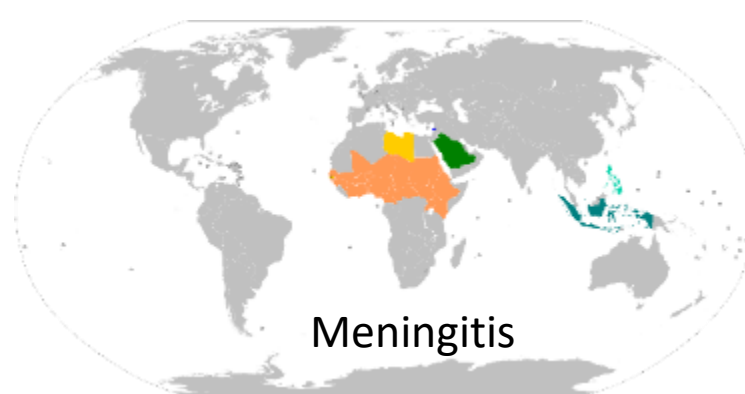

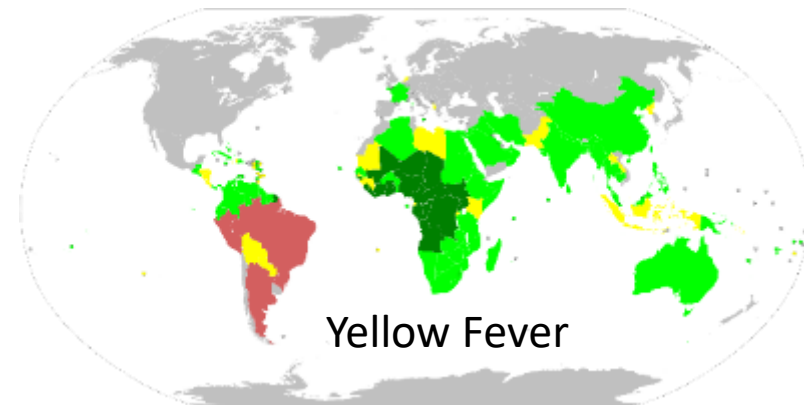

**Parents and general public** use the information to enroll children in schools and day care and to determine if they need vaccinations.

**Doctors and health care providers** use IISs to determine which vaccinations are needed and to care for patients.

**Public health** uses the information to develop programs that increase vaccination coverage and decrease the harm caused by vaccine-preventable diseases.

# Parent/Person: Vaccine Registries are a SECURE and TRUSTED SOURCE for vaccine records

- No need to call/log on to multiple offices or wait for a copy
- For School
- For Camp
- For Travel: Many countries require proof of vaccine status

# Healthcare Providers: Vaccine Registry Provides a TRUSTED SOURCE for vaccine information

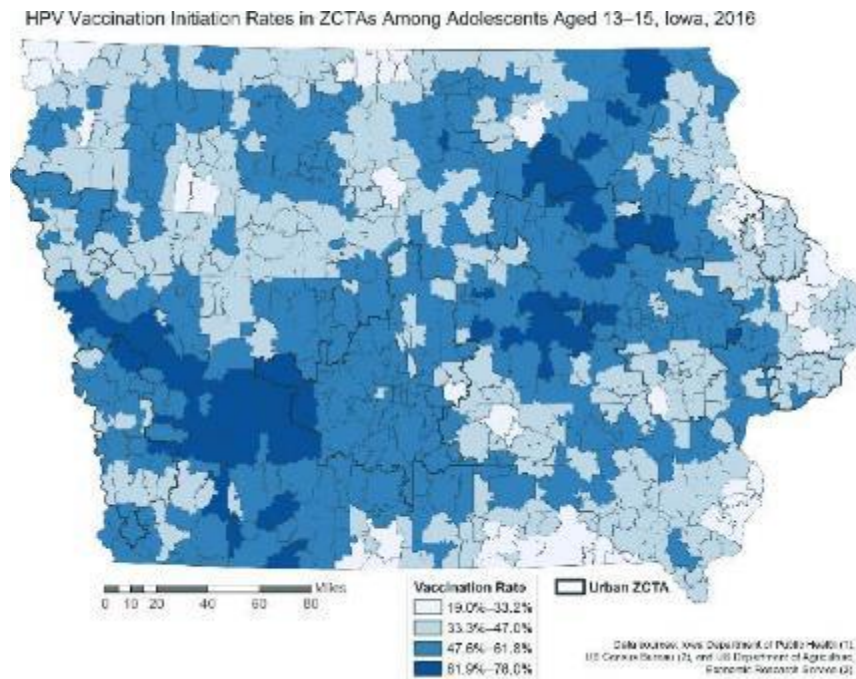

- Provides needed information including formulation, dates, manufacturer
  - This information is NEEDED to determine if up-to-date for series
    - For example: Injected Polio Vaccine vs. Oral Polio Vaccine
- Decreases over-vaccination due to incomplete information
- Facilitates identification of patients if there are changes in the vaccine schedule

# Community: Vaccine Registries allow identification of populations at risk for targeted outreach to improve vaccination rates and reduce disease

## Mapping of HPV Vaccine uptake in Iowa

In 2013, in response to an epidemic in Vermont, NH health officials called schools throughout NH to determine if kids were vaccinated against whooping cough.

A vaccine registry would have eliminated this manpower need

# Vaccine Registries: Opt-Out far superior to Opt-In in terms of paperwork/manpower

- BOTH allow choice and convenience for parent/patient
- Current state: Opt-Out requires a signature to not include in registry, followed by scanning to chart
- Opt-In would require a signature which is a BARRIER to participation, requires paperwork for more patients (since most want to participate)
- Only Texas and Montana are Opt-In, remainder are Opt-Out
- ALWAYS have the option to remove from database with signature

# In Sum:

Vaccines are good for Individual,  
Family and Community Health

Vaccine *registries* are good for  
Individual, Family and Community  
Health (and opt-out is better!)

# 2022 NH Legislation: Public Health Overview

## Public Health Infrastructure

[HB 1606](#) – opt-in immunization registry

## Pediatric Policy

[HB 1241](#) – prohibit a school district from mandating a COVID-19 vaccination

[HB 1379](#) – DHHS rulemaking authority re immunizations

[HB 1633](#) – requiring COVID-19 vaccination for school attendance

[SB 288](#) – prohibiting requiring COVID-19 vaccination for school/care enrollment

## Healthy Communities

[HB 1604](#) – conscientious exemption

[HB 1210](#) - exemption from vaccine mandates

[HB 1455](#) – state enforcement of federal vaccination mandates

# 2022 NH Legislation: Public Health Bill Status

## Public Health Infrastructure

[HB 1606](#) – opt-in immunization registry  
House HHS recommended OTP (pass) as amended  
Will be voted on by the full House before 3/31

# 2022 NH Legislation: Public Health Status

## Pediatric Policy

[HB 1241](#) – prohibit a school district from mandating a COVID-19 vaccination

House Education recommended OTP (pass) 10-8; full House will vote before 3/31

[HB 1379](#) – DHHS rulemaking authority re immunizations

House voted OTP (169-164) with amendment

Will be introduced to the Senate, likely Senate HHS

[HB 1633](#) – requiring COVID-19 vaccination for school attendance

*Failed in the House*

[SB 288](#) – prohibiting requiring COVID-19 vaccination for school/care enrollment

Senate Health and Human Services Committee to make a recommendation to the Senate;

Full Senate will note before 3/31

# 2022 NH Legislation: Public Health Status

## Healthy Communities

**HB 1604** – conscientious exemption

Passed House 176-174 and referred to House Finance

**HB 1210** - exemption from vaccine mandates

House voted OTP (181-155) with amendment

Will be introduced to the Senate

**HB 1455** – state enforcement of federal vaccination mandates

House voted OTP (174-159)

Will be introduced to the Senate

## **Helen of Hanover NH**

76 year old woman who retired 10 years ago from her position as a professor of mathematics from Dartmouth. She lives alone, but has an active social life attending church regularly, exercising 3 times a week at a local exercise facility and engaging in many lively family zoom sessions. She does have mild heart failure but this is well controlled with her medicines which she takes regularly.

COVID-19 has impacted her like it has all of us. She has been vaccinated and boosted (as has everyone in her immediate circle of friends).

Helen developed a cough in mid-February. When she first developed symptoms, she went on line, scheduled a COVID-19 test, got in her car and got the test. After receiving her positive results, she completed a video-telehealth visit with her PCP and her cardiologist. Her physicians recommended oral anti-viral treatment and she was able to ask a friend to pick up her medication and she started the therapy immediately. Her supportive friends delivered food and set up a system to check in on her twice a day. She was able to isolate at home without difficulty and, thankfully, she did well and has now recovered fully.

## Jean of Newport NH

Jean is a 76 year old woman who worked for years as a checker at Hanafords and has struggled financially since leaving that job 10 years ago. She lives alone and doesn't have a car so rarely leaves her home. She does not have any wifi in her home nor does she have a computer or a smart phone. She has a cell phone but service is unreliable at her home. She used to smoke (and she has a bad chronic cough with phlegm) and a couple of years ago she was told she had mild heart failure but she hasn't been back to the physician for a while and when her prescriptions ran out last month, she didn't get them refilled for many reasons including lack of transportation and co-pays for the meds.

COVID-19 has impacted her like it has all of us. She did get her first vaccine when the regional public health network hosted a clinic not too far from her home but she couldn't get a ride to get her second vaccine and she didn't get boosted. And honestly, she had heard that the vaccine had a microchip in it that allowed the government to track her whereabouts so she wasn't sure she wanted to get another vaccine anyway.

Jean developed a worsening cough in mid-February. She felt terrible but thought it was just a cold. She thought about getting a COVID-19 test but she couldn't get to the testing site. Over the next couple of days she began to struggle to catch her breath and finally, she called 9-1-1.

She arrived in the ED with a dangerously low oxygen level and had to be immediately intubated and placed on a ventilator. After 10 days in the ICU, she died.

# Income and other social conditions are key drivers of health

## HANOVER, NH

**85.3 yrs.**

life expectancy

**\$113,925**

median household  
income

**71.5%**

COVID vaccinated

**9.5**

Asthma ED visits rate

per 10k

## NEWPORT, NH

**75.9 yrs.**

life expectancy

**\$52,486**

median household  
income

**51.5%**

COVID vaccinated

**80.3**

Asthma ED visits rate  
per 10k

# Today's discussion

- Recognize that health outcomes are largely impacted by factors outside of the services delivered in the hospital and clinic
- Understand the health of our population deeply impacts our prosperity and economic vitality
- Demonstrate why we need to work “upstream” and address the social and political determinants of health

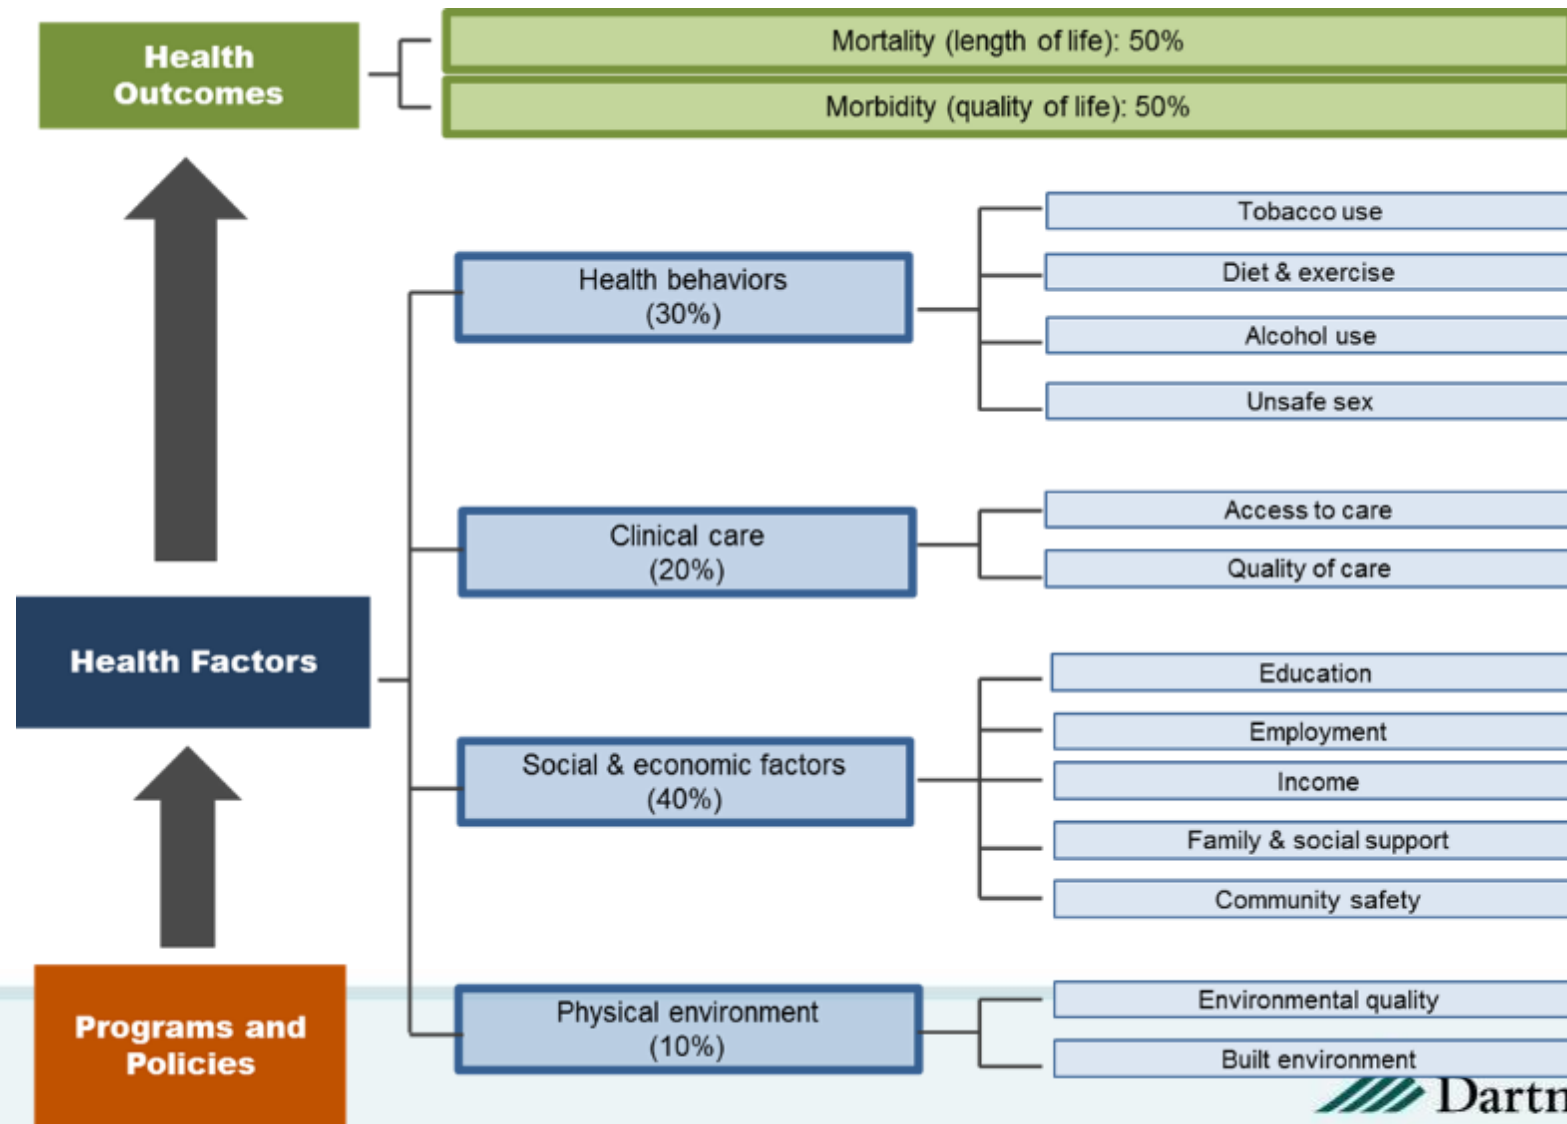

# Social Drivers of Health

The circumstances in which people are born, grow up, live, work and age, as well as the systems put in place to deal with illness. **These circumstances are, in turn, shaped by a wide set of forces: economics, social policies, and politics.**

# Social Drivers of Health

## Five Most Pressing Social Determinants of Health

### Housing

#### Examples

- Housing quality and instability
- Neighborhood violence

**26-36**

#### Impact

Years of reduced life expectancy for those experiencing homelessness<sup>3</sup>

### Food

- Inaccessible, unaffordable healthy food
- Disconnection from benefits (e.g., SNAP)

**74%**

Of food insecure households had to choose between paying for food and medicine<sup>4</sup>

### Economics

- Insufficient wages
- Lack of insurance coverage

**2x**

Greater mortality risk for Medicaid beneficiaries vs. private insurance<sup>5</sup>

### Interpersonal

- Social isolation
- Discrimination
- Provider bias

**26%**

Increased risk of mortality resulting from loneliness<sup>6</sup>

### Education

- Health illiteracy
- Lack of language skills
- Quality of public schools

**9 years**

Gap in life expectancy for those without a high school diploma vs. college graduates<sup>7</sup>

When it comes to health, your zip  
code matters more than your  
genetic code

## Socio-Economic Markers

# US Health Disadvantage

- US has poor health outcomes compared to other wealthy countries
- US spends more money on health care than other wealthy countries
- We bear the economic burden of poor health
  - Employers pay more for health insurance.
  - Lost productivity in the workplace.
  - Taxes to care for uninsured, disabled,

**Health and the economy are inextricably linked. Both must thrive if either is to be strong.**

# The US spends more on health care services but has worse health outcomes compared to other countries

**Table 1.2 Indirect costs to U.S. employers due to diabetes**

Average single-person deductibles for employer coverage, by state, 2017

Increase in the average deductibles in New Hampshire is one of the highest in the US (second only to VT)

Dartmouth-Hitchcock

## Upstream

Improving the socioeconomic and environmental conditions, policies, payment systems that impact the health of our populations

## Midstream

Assisting patients where they live

## Downstream

Caring for patients in our hospitals, clinics

# Manchester NH

## *Redlining*

# COVID-19 Cases Per 100k People By Race and Ethnicity In New Hampshire

# Political Determinants of Health

Three major aspects of the political determinants of health:

1. Voting
2. Government
3. Policy

# To remember from today

- 80% of health is determined by socioeconomic, behavioral, environmental factors. Only 20% of health is determined by health care.
- The vitality and prosperity of our communities is deeply impacted by the health of the population.
- To improve health and health equity, we need to work “upstream” on the systems and forces that shape the conditions of our lives.

...we should be engaging in open and robust discussions of how politicians and politics affect and shape our patients' lives, our communities, and the social determinants of health themselves.

# Reminders

- Next session on March 23<sup>rd</sup>  
*Immunization & Immunization Registries*
- Enter name, organization, and email into chat
- Didactic recordings are posted on the D-H internet site:
